Most of my work sits between figuring out what needs to be built and actually making it happen. I've shipped two full-stack SaaS products solo, Bevisly.com and MockMate.space, both live in production and built without a team. At Trailr AI I ran product discovery and helped shape a product that now has enterprise trials with Nordisk Film and DR. At Millennial Consulting, I kept 25+ client engagements running across two years with no full-time staff. I'm technical enough to prototype in code and work directly with engineers, which tends to make things move faster.

Areas of expertise:

Product & Leadership: Product Discovery | User Research | Roadmapping | Agile/Scrum | Stakeholder Management | Cross-functional Collaboration | Project Management (Google Certified)

Technical: React | TypeScript | Next.js | Node.js | Supabase | PostgreSQL | AWS | REST APIs | Git | SQL | Vercel

Experience:

Trailr-AI

Sep 2025 - Present

Product & Frontend Engineer

Remote, Denmark

- The platform needed a full UI/UX overhaul; I ran product discovery end to end, from user research and journey mapping to success criteria and a design system built from the findings.
- My role sat across product, design and engineering: keeping context aligned across all three so features shipped without the three pulling in different directions.
- User research and competitive analysis pointed to something specific: non-linear workflows were the real differentiator. I explored and defined what that meant as an alternative to timeline-based editing.
- The product now has enterprise trials running with Nordisk Film and DR. That's where the product direction work landed.

MockMate

May 2026 - Present

Personal Project

Copenhagen, Denmark

- MockMate is an AI-powered interview practice tool: paste a job description, get questions tailored to that specific role, answer them, and receive structured feedback on each answer rather than generic tips.
- The AI runs two separate flows on purpose: a real-time conversation during the interview, and a separate grading pass at the end that produces a structured report. Keeping them apart makes the feedback consistent.
- Session answers go to the database before the AI processes them. If a call fails mid-interview, nothing is lost and the user can continue from where they stopped.
- Post-session summary emails are sent through AWS Lambda asynchronously, so the completion screen loads immediately rather than waiting on email delivery.

Bevisly

Aug 2025 -

Present

Personal Project

Copenhagen, Denmark

- Traditional resumes have a bias problem baked in. Bevisly started from that observation and became a

proof-over-resume platform where candidates demonstrate skills through real tasks instead.

- Before writing a line of code, I mapped who was using this and why: user personas, core journeys, product constraints. The build came after the thinking.
- Two roles, employers and candidates, each needing strict data separation. That was a product requirement from day one, enforced at the database layer rather than patched in later.
- The Kanban talent board needed to feel right for recruiters. Real-time state updates and a clear column structure made the workflow visible without adding friction.
- Ghosting is a real problem on both sides of hiring. The Employer Responsibility Score and Candidate Reliability Score are the mechanism I designed to make that visible and create some cost for it.

Millennial Consulting

Sep 2023 - May 2025

Head of Organization, Volunteer → promoted from Head of Operations

Copenhagen, Denmark

- 25+ client engagements across 4 cycles, 90%+ satisfaction each time. I ran the full project lifecycle for all of them.
- Recruitment, client relations, budget, external firm partnerships: I kept all of it running across every cycle with no full-time staff.
- The organisation ran on waterfall. I introduced Agile/Scrum in parallel, and the hybrid ended up adopted org-wide.
- 10+ joint workshops with external consulting firms, 75+ student participants getting real consulting experience. I ran those relationships and made those sessions happen.

Education:

Uppsala University

Aug 2019 - June 2022

BA in Game Design and Project Management

Uppsala, Sweden

Uppsala University

Aug 2022 - June 2023

MSc in Business and Management - Entrepreneurship

Uppsala, Sweden

Jensen Yrkeshögskola

Aug 2024 - May 2026

Professional Bachelor's degree in Frontend Development

Malmö, Sweden

Additional:

Certificates: [Google Project Management Certificate](#) | Issued by Google

Languages: Thai (Native), English (Fluent), Swedish (Fluent) and Danish (Beginner).

Work authorization: EU citizen - full right to work in Denmark and across the EU.
